

## Electronic ID Card (EID)

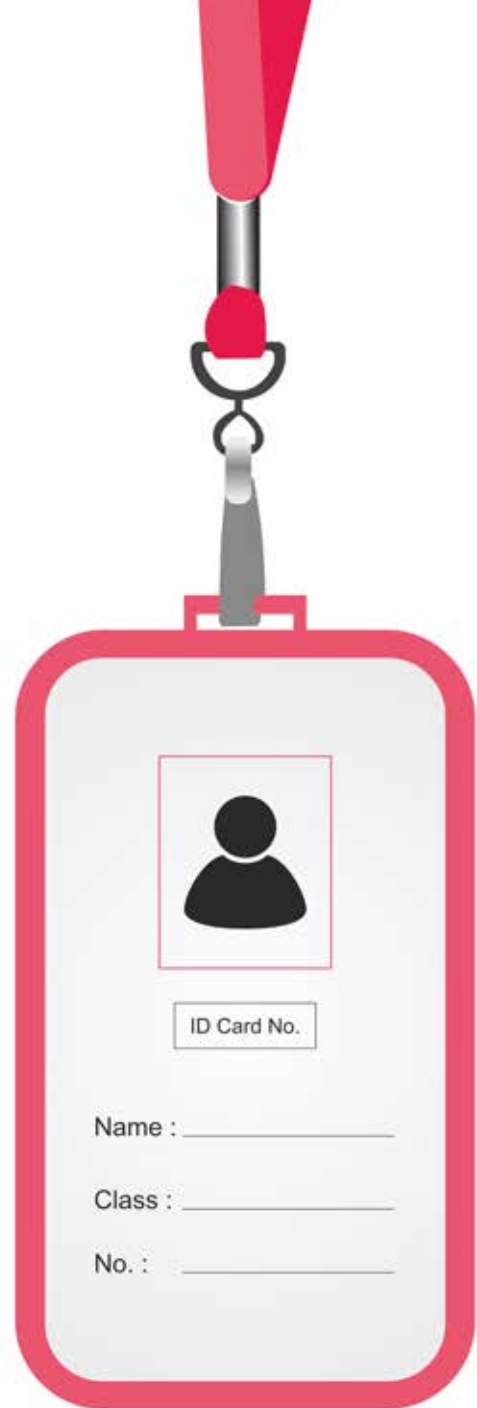

Ever thought about ID card acting as a tracker. A tracker with SOS button for emergency communication and micro USB charger port. It can be able to detect whenever it get removed by student/employees using proximity sensor. EID is introduced in to the market by mainly focusing students and employees. It provides fencing facility which will restrict students/employees to go somewhere without the permission of go somewhere without permission of management. There are two mode of working normal mode and standby mode. In normal mode device will be active all time because of that its battery will get dry so fast. In standby mode device will work 10 min every 3 hour inside a geo fence (inside institution) and work full time outside geo fence (inside institution). When battery gets low it will notify you to charge through message. Main feature of EID is its adaptability to customization. We can design id card as per you need.

## Features:

---

- All time live tracking
- Tracking by demand
- proximity sensor
- Geo fence
- Login through application/website
- Inbuilt Antenna
- Micro USB charging port
- Low power consumption mode
- Backup 18 hour in normal mood / 3-4 days in standby mode
- Message alert when battery get low
- Compact, weightiness with Tamperproof
- Size 90mm\*60mm\*7mm (length\*breadth\*height)
